

Name: Javaughn Stevens

Date: April 18, 2026

M#: M21185543

1. What did you learn?

I learned about graphs and applied them in a wide variety of different exercises, as well as even connecting them to previous concepts such as arrays, queues, and indirectly, trees. Graphs are useful for certain things that normal trees cannot do and I also learned about multiple different algorithms to traverse through a graph.

2. What challenges did you encounter, if any?

As expected the lab had many exercises but it still took me far longer than I anticipated to complete it.
